FTR Analyst (revised 7/7/2011)

Recruiting Summary-Job 1681ws

Client Background/Opportunity:

The client is a strong physical/financial trading group in the Midwest, which has continued to profit in power and natural gas markets, even in a difficult environment.

As with other firms, it seeks new/different market niches to exploit with knowledgeable analysts and traders. The FTR market is a focus, and the newer congestion markets in the west are of interest.

This is an excellent opportunity for the analyst with 2 or more years of experience who wants to move into a trading role in the future and really understands the transmission grid.

Position: FTR Analyst

This is not a basis- or swaps-trading role, it is exclusively focused on FTR trading/auctions.

The client has strong analytical talent on board, but those resources are committed to other FTR markets. So this position will focus on NY, NE and California.

Since the congestion market in California is new, a strong background in the other two may suffice if the individual can demonstrate past success in analyzing a new region. Or, it could be a specialist in California markets that wants to leverage his or her experience.

Candidates need not have traded before, but must show that they can operate in the fast-moving trading world.

Requirements:

Candidates must have at least 2+ years experience in the power industry with a main focus on LMP markets..

A MS degree or PhD in engineering or physical science with excellent math skills is expected, plus indepth experience in analyzing transmission markets..
