## **Power Market Analyst**

### **Recruiting Summary-Job 1695ws**

#### **The Opportunity:**

This position is open because the prior incumbent was promoted to another area of the company, and the manager is seeking another fast-track professional to fill that person's shoes.

Unlike other fundamental analysis roles, this has exposure to senior management. The position is found within the firm's finance group, and is part of a team that provides data for key financial projections.

This individual will be responsible for tracking market developments, forecasting market prices, conducting market analyses, and forecasting gross margins.

For someone who has a technical background, the position offers the ability to broaden his or her background into the financial realm, and pick up a number of financial analysis/business analysis skills.

The position reports to an outstanding manager, who has a strong grasp of analytics and business, and who has been successful in mentoring staff.

**Location:** Metropolitan Area-Northeast US

#### **General Duties:**

The duties include:

- Tracking fuel, emission, and power market developments, and updating internal assumptions.
- Developing forecasts of fuel, emission and power prices, using both in-house fundamental models and external market sources.
- Analyzing the potential market impact of prospective changes in rules, supply, demand, or transmission projects.
- Forecasting the profitability of the firm's portfolio of generating units, load contracts and hedges.
- Forecasting profitability of third-party assets or development opportunities.

#### **Education Desired:**

-Bachelors degree in Engineering, Economics, or other quantitative discipline.

Required Competencies:

- At least 3 years of experience in wholesale power market analysis
- Ability and willingness to learn production cost modeling – prior experience strongly preferred (e.g. Promod, Prosym, Aurora, UPlan, etc.)
- Understanding of generation technology, wholesale power markets (incl. LMP construct, ancillary services and capacity markets), environmental regulation, and market design
- Very strong quantitative analytical skills
- Strong attention to detail, even under time pressure
- Advanced computer skills, including advanced Excel, relational databases, and ability to use quantitative tools and models.

**Desired Qualifications:**

- Knowledge of Northeast power markets (PJM, New York, New England)
- Load flow and nodal modeling experience
- Familiarity with energy trading and structuring concepts, including risk analysis and options theory
- Business and financial education and experience.

**Executive Search Contact:**
