Real-Time Power Trader

Recruiting Summary-Job 1756

The Opportunity

While the power trading business continues to struggle, the smart players still have ways to make money by carefully trading the physical business. This firm is one such player and is seeking to grow. The management team has many years of experience in successful proprietary trading, and so this is a good spot for the aspiring trader to learn and grow.

The current position does not allow for significant proprietary bets, but does allow one to get on board and become a member of a very competent team and showcase one's talent. In addition, since one will schedule in most pools, it will allow one to learn other, active markets.

The position is located in the northeast.

Position/Duties: Real-Time Trader

The position is responsible for short-term energy purchases, sales and management of physical assets (i.e. generation, load and transmission).

Requires knowledge of energy trading markets and trading practices.

Will be scheduling in most pools: PJM, MISO, CAISO, NEISO, ERCOT, NYISO & IESO.

Analyze market conditions and monitor transactions to help identify short-term/term market opportunities.

Must adhere to risk management guidelines and be familiar with industry regulatory standards & practices.

Reports to head of the department and will be required to work on the typical shifts associated with real-time trading.

Requirements:

Position may require a bachelor's degree and 2-5 years of experience in the industry or in a related field. System operator certification desirable.

Must have a BS/BA with reasonable grades, good analytical skills, and have demonstrated the ability to manage risks in an active market.
